

PARLIAMENT OF AUSTRALIA
HOUSE OF REPRESENTATIVES

THE HON DANNA VALE MP
FEDERAL MEMBER FOR HUGHES

15 March 2010

Senator the Hon Kim Carr
Minister for Innovation, Industry, Science and Research
Parliament House
CANBERRA ACT 2600

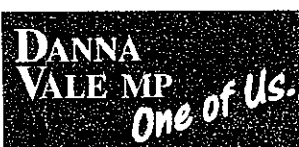

Dear Minister, *Kim*

RE: CSIRO/BoM GCM STRUCTURALLY UNSOUND

Thank you for your letter of 22 February 2010 in response to mine of 14 December 2009 regarding the above and recent empirical scientific discoveries by Paltridge et al. and Wentz et al. in relation thereto. Thank you also for attaching the analysis paper from the CSIRO and for the offer of an oral briefing by the CSIRO.

Paltridge and Wentz each made separate empirical discoveries based on separate real world observational data. Notwithstanding your assertion to the contrary, the plain fact is that each of their empirical discoveries **does prove** unequivocally and to date irrefutably that the global climate model (GCM) managed jointly by the CSIRO and Bureau of Meteorology is structurally unsound and its climate forecasts are grossly exaggerated. The CSIRO's refusal to accept either of these two empirical discoveries does not change this fact. The CSIRO obviously presumes and is undoubtedly hopeful that someone, somewhere, at some time in the future will prove both of these two empirical discoveries are false, but unless and until that happens their GCM remains structurally unsound.

Your letter confirms that, notwithstanding one year (Paltridge) and three years (Wentz) of "rigorous review" by the whole of the global warming scientific community, these empirical discoveries made by Paltridge and Wentz respectively are still in force. This means of course that the CSIRO's forecasts of catastrophic anthropogenic global warming are most likely plainly wrong and are at best severely compromised. In consequence the recommendations in the Garnaut Review (2007) and the Rudd government's CPRS legislation are also most likely plainly wrong and are at best severely compromised.

The CSIRO has now advised you in writing that they are unable to disprove either of these empirical discoveries and are therefore basing their forecasts of catastrophic anthropogenic global warming on presumption.

With great respect, as the responsible Minister you will by omission mislead the parliament and the people of Australia if you do not inform them that each of the empirical discoveries made by Paltridge and Wentz respectively **does prove** that the joint CSIRO/BoM GCM is structurally unsound and the CSIRO is unable to prove that either of these empirical discoveries is false.

Parliament needs to know this, the people of Australia need to know this and you as Minister have a duty to inform them.

I will write to you again shortly in respect of the analysis paper from the CSIRO. Hopefully the CSIRO can be convinced that, sooner rather than later, it is in their interests to bow to the inevitable and make their GCM compliant with the empirical discoveries made by Paltridge and Wentz respectively.

Yours faithfully

DANNA VALE MP
FEDERAL MEMBER FOR HUGHES
